

TENSION PNEUMOTHORAX AND NEEDLE DECOMPRESSION

DISCLOSURES

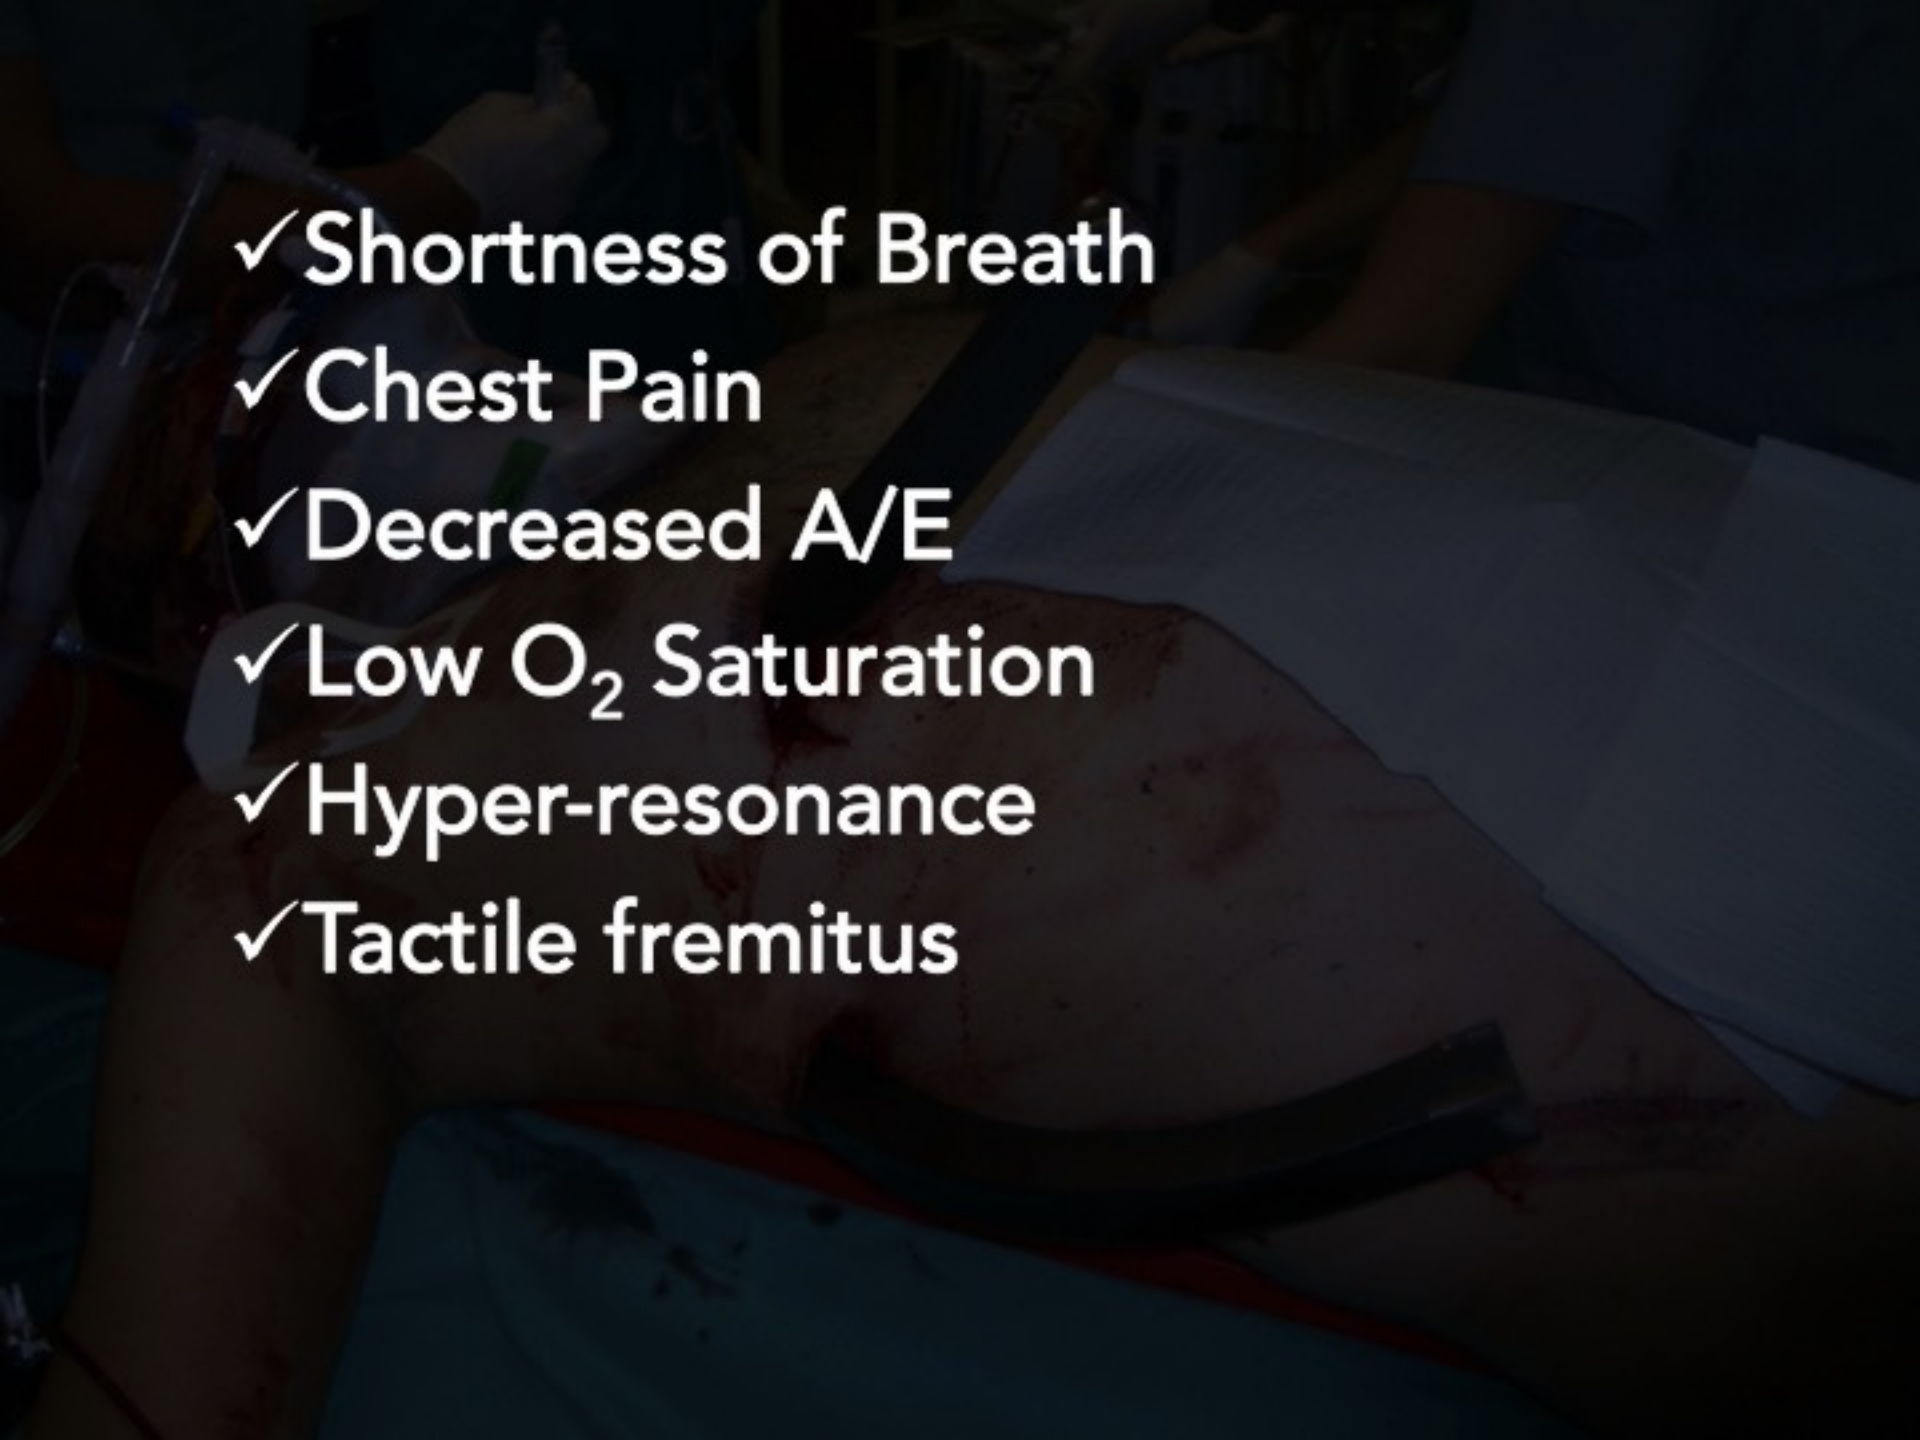

✓None

OBJECTIVES

- ✓ What is Tension Pneumothorax
- ✓ Treatment and Pitfalls
- ✓ New directions

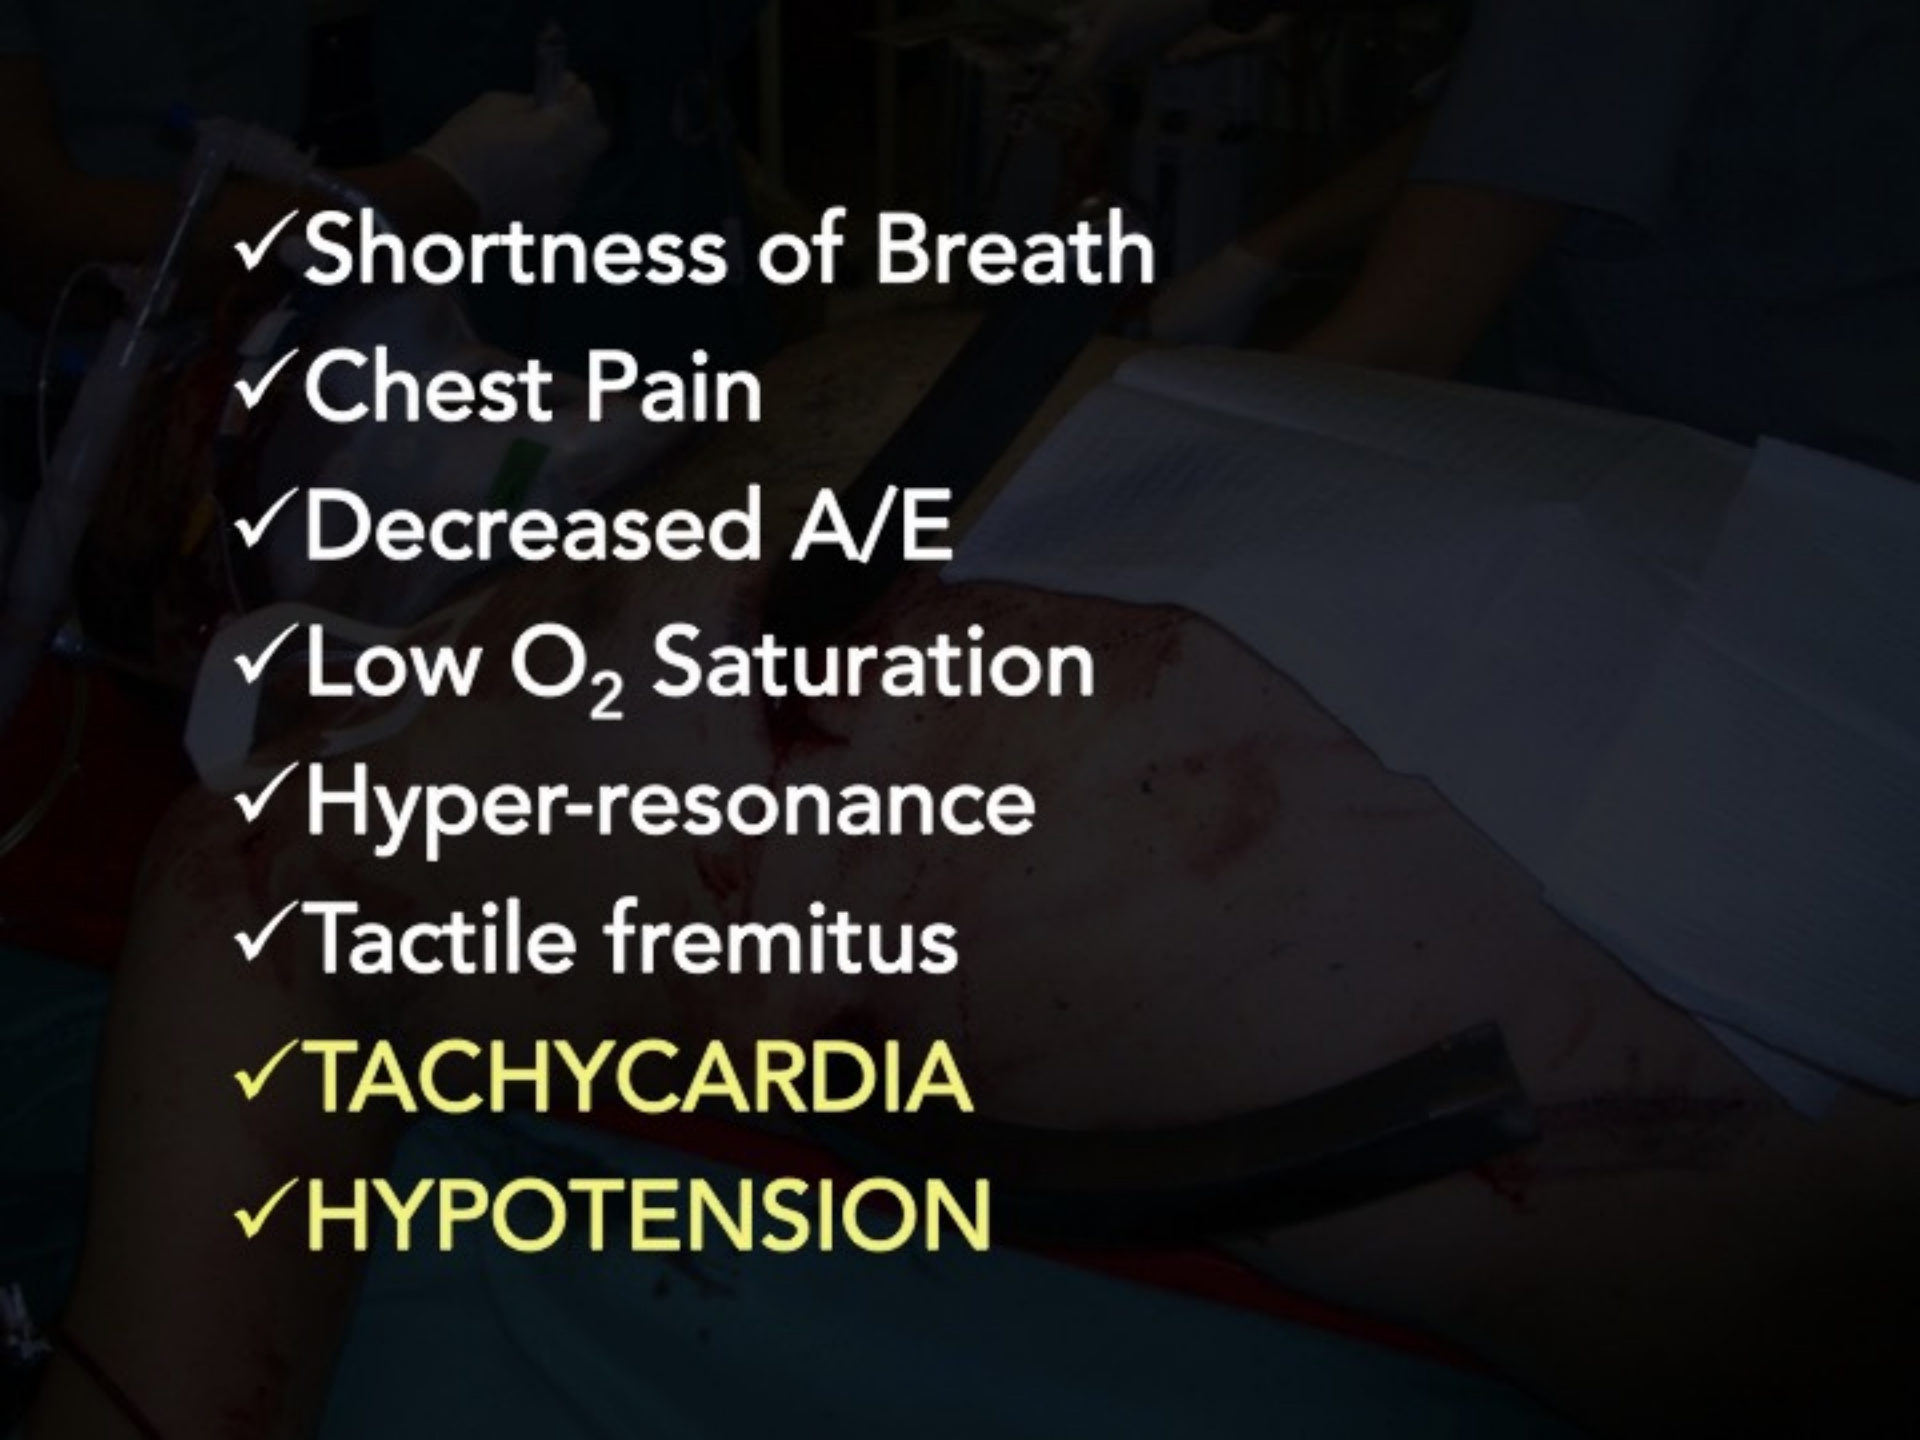

OBJECTIVES

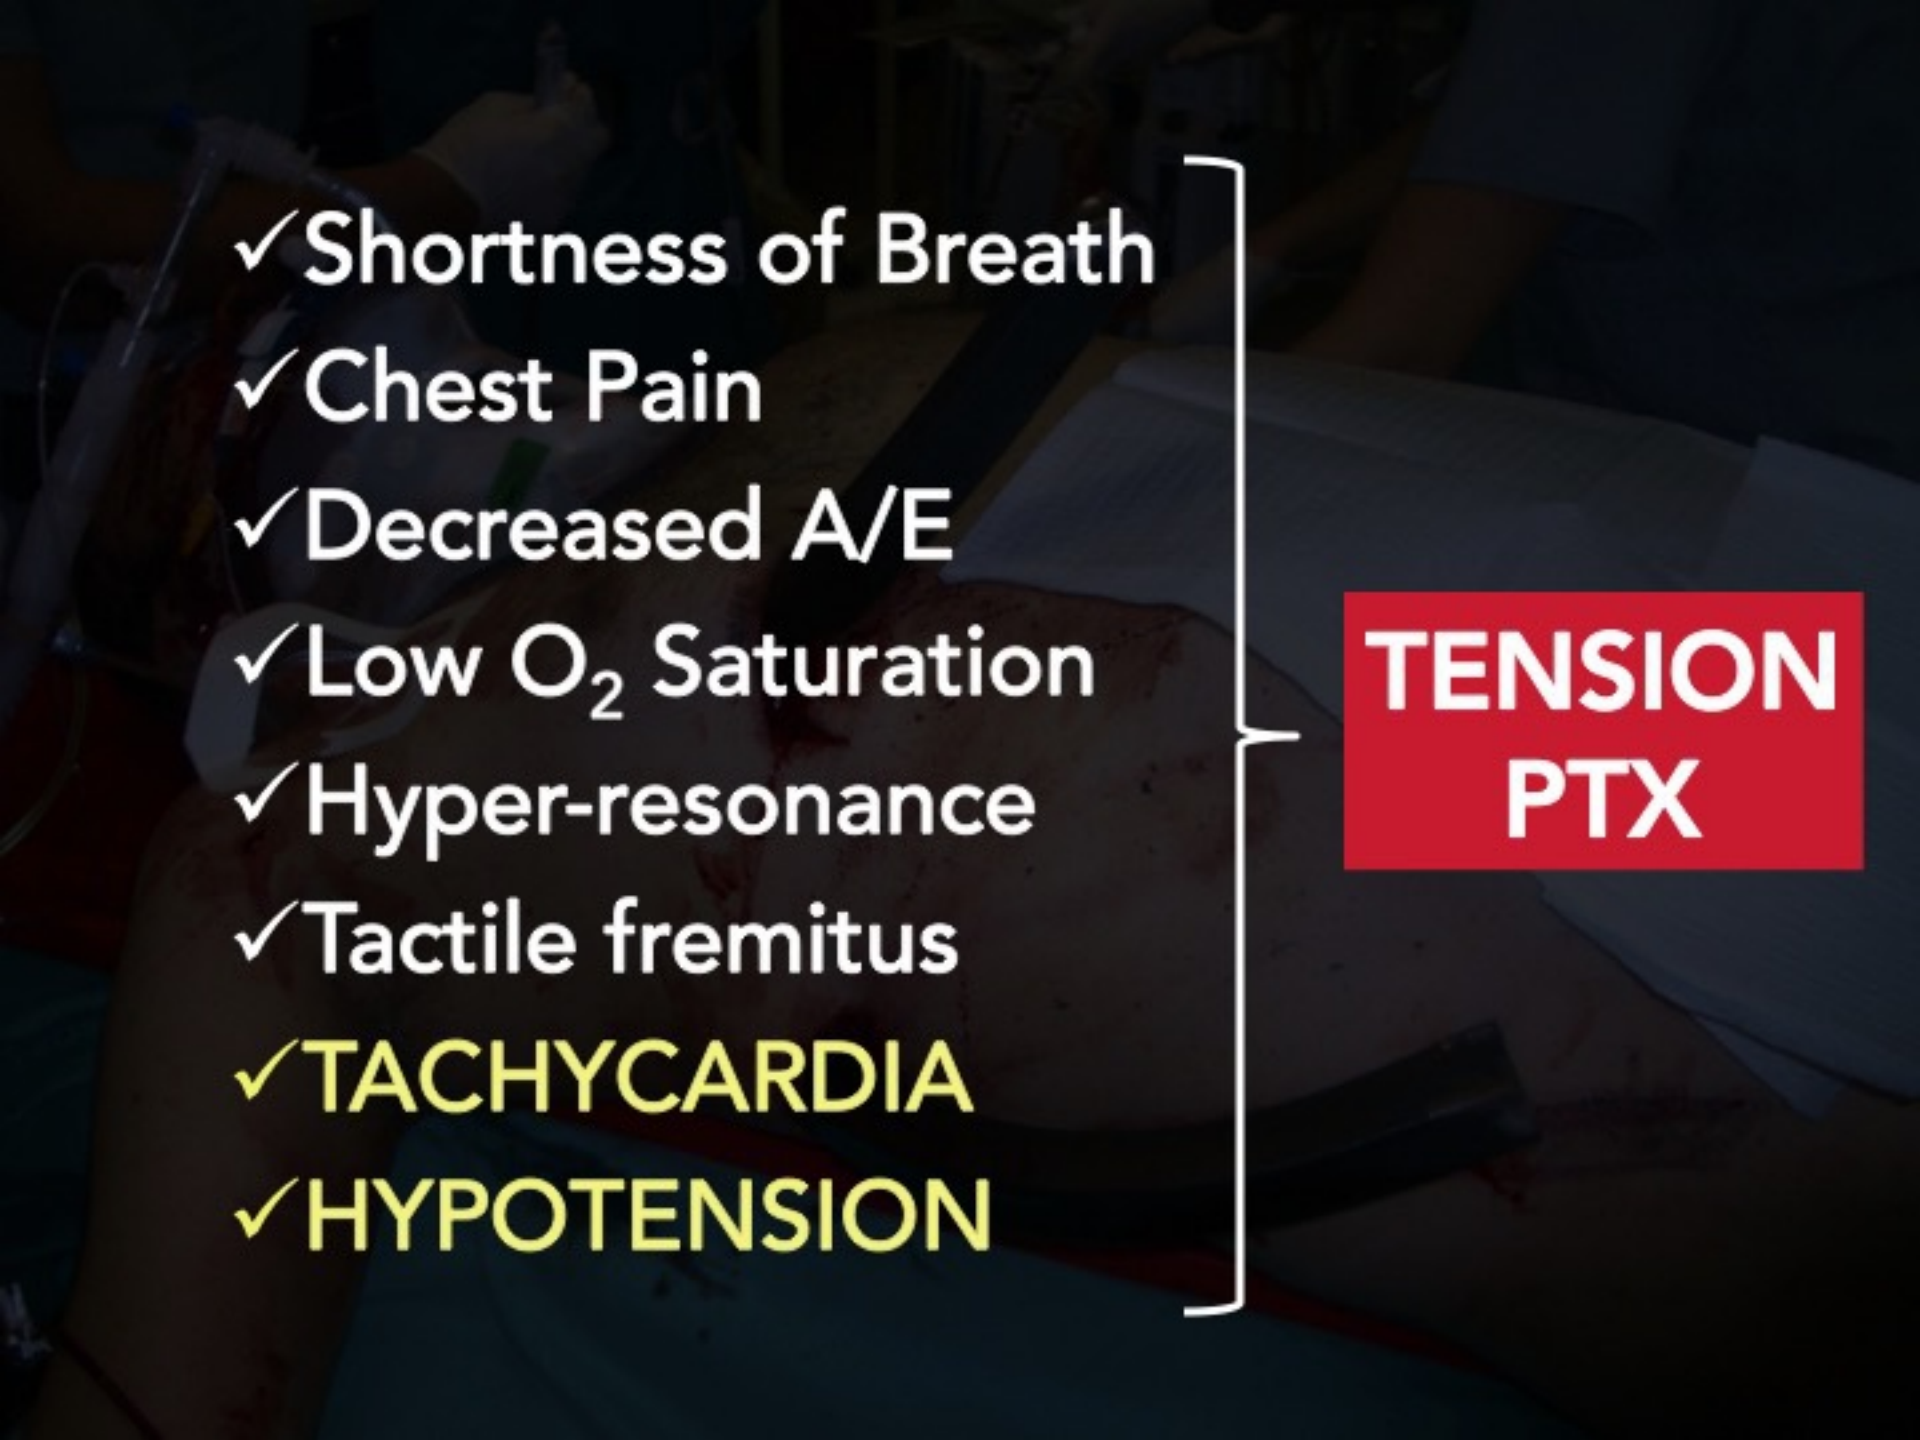

- ✓ What is Tension Pneumothorax
- ✓ Treatment and Pitfalls
- ✓ New directions

- 
- A patient is lying on a gurney, appearing to be in a medical setting. The patient's chest is visible, and there are some medical devices and papers around them. The background is dark and out of focus.
- ✓ Shortness of Breath
 - ✓ Chest Pain
 - ✓ Decreased A/E
 - ✓ Low O₂ Saturation
 - ✓ Hyper-resonance
 - ✓ Tactile fremitus

OBJECTIVES

- ✓ What is Tension Pneumothorax
- ✓ Treatment and Pitfalls
- ✓ New directions

DIFFERENT INSERTION SITE?

- 5th Intercostal space, anterior axillary line
- Potential benefits
 - ✓ Easily accessible supine
 - ✓ Does not impact transport
 - ✓ Experience with CT insertion

Optimal Positioning for Emergent Needle Thoracostomy: A Cadaver-Based Study

*Kenji Inaba, MD, FRCSC, FACS, Bernardino C. Branco, MD, Marc Eckstein, MD, David V. Shatz, MD,
Matthew J. Martin, MD, Donald J. Green, MD, Thomas T. Noguchi, MD,
and Demetrios Demetriades, MD, PhD*

2011

- ✓ **Human cadavers**
- ✓ **Traditional 2nd v. 5th ICS**
- ✓ **5cm standard catheter**
- ✓ **80 needles into 20 cadavers**
- ✓ **Clamshell to assess penetration**
- ✓ **Chest wall thickness measured**

2ND MID-CLAVICULAR

This is a photograph of a human back, showing the skin texture and the spine. Two yellow pins are placed on the skin to mark specific anatomical lines. One pin is located on the upper back, and the other is on the lower back. The text '2ND MID-CLAVICULAR' is overlaid in a red box at the top of the image.

5TH ANTERIOR-AXILLARY

This is a photograph of a human back, showing the skin texture and the spine. Two yellow pins are placed on the skin to mark specific anatomical lines. One pin is located on the upper back, and the other is on the lower back. The text '5TH ANTERIOR-AXILLARY' is overlaid in a red box at the bottom of the image.

Matthew J. Martin, MD, Donald J. Green, MD, Thomas T. Noguchi, MD,
and Demetrios Demetriades, MD, PhD*

2011

- ✓ **CWT 3.5 v. 4.5cm ($p < 0.001$)**
- ✓ **2nd ICS – 58%**
- ✓ **5th ICS – 100%**

SUCCESSFUL PENETRATION

SUCCESSFUL PENETRATION

Cadaver Summary

- ✓ Chest thicker at 2nd v. 5th ICS
- ✓ Especially females
- ✓ 42% of 2nd ICS did not penetrate chest
- ✓ 100% at 5th ICS successful

Cadaver Summary

- ✓ Chest thicker at 2nd v. 5th ICS
- ✓ Especially females
- ✓ 42% of 2nd ICS did not penetrate chest
- ✓ 100% at 5th ICS successful

NO cardiac, lung, hilum, aorta, spleen or liver injury...

Radiologic Evaluation of Alternative Sites for Needle Decompression of Tension Pneumothorax

Kenji Inaba, MD; Crystal Ives, BSc; Kelsey McClure, BA; Bernardino C. Branco, MD; Marc Eckstein, MD, MPH; David Shatz, MD; Matthew J. Martin, MD; Sravanthi Reddy, MD; Demetrios Demetriades, MD, PhD

2012

- ✓ Evaluate 2nd v 5th using Chest CTs of real patients
- ✓ Trauma >16yo undergoing Chest CT for trauma
- ✓ 30 random from each of 4 BMI quartiles

2nd ICS

CWT

Aims

- ✓ Chest Wall thickness at each position?
- ✓ Could a standard 5cm needle penetrate the chest?

CHEST WALL THICKNESS

FAILED CHEST ENTRY BY BMI

FAILED CHEST ENTRY BY BMI

FAILED CHEST ENTRY BY BMI

FAILED CHEST ENTRY BY BMI

SUMMARY

- Thickness of 2nd > 5th
- Both R and L
- Worse as BMI increases
- At 2nd, with eccentric placement, all but first quartile would fail
- At 5th, decompression possible in all but last quartile

Studies

1. CADAVERIC MODEL
2. CT BASED HUMAN EVALUATION
3. EMS EVALUATION

The right place in the right space? Awareness of site for needle thoracocentesis

E P Ferrie, N Collum, S McGovern

2005

- ✓ **25 EM physicians in Ireland**
- ✓ **84% ATLS certified**
- ✓ **Do they know where to Needle?**
- ✓ **Can they find it on a live model?**

The right place in the right space? Awareness of site for needle thoracocentesis

E P Ferrie, N Collum, S McGovern

2005

- ✓ **88% named 2nd ICS MCL**
- ✓ **Only 60% able to point out where this was on patient**
- ✓ **4% pointed out 5th ICS AAL**
- ✓ **8% wanted to needle abdomen below & lateral to xiphoid**

EMS

- ✓ Ability of Navy corpsmen to place 2nd versus 5th needles
 - Accuracy
 - Time to decompression
 - Collateral damage

EMS

- ✓ 20 Corpsmen, 80 needles
- ✓ 25.5+/-3.9 years, 75% male
- ✓ 4.4+/-3.3 years experience
- ✓ Half previous deployment

RESULTS

- ✓ Time to insertion
- ✓ Ease of localizing and inserting needle
- ✓ Accuracy

RESULTS

- ✓ Time to needle placement
 - 15.3s v 16.1s, $p=0.438$
- ✓ Ease of finding position
 - 75% rated 5th easier, 15% the same, 10% as harder

ACCURACY

- ✓ Accuracy within a 10cm circle
 - 95.0% v 27.5%, $p < 0.001$
- ✓ Aggregate distance from correct position
 - 1.5+/-1.6 v 3.5+/-1.6cm, $p < 0.001$

Take Home Points

- ✓ Indications for needle decompression not well delineated
- ✓ If going to needle, know the following...

Take Home Points

- ✓ Standard Angiocath $<5\text{cm}$
- ✓ Chest wall 2nd ICS $>5\text{cm}$ in 40-50%
- ✓ Most in upper $\frac{3}{4}$ of BMIs cannot be decompressed with standard needle

Take Home Points

- ✓ In controlled experiments, 60% will fail entry
- ✓ R and L
- ✓ Females > Males
- ✓ Worse as BMI increases

Take Home Points

- ✓ May not be in chest
- ✓ If not responding, try again with a different angle
- ✓ Especially for females or obese
- ✓ May consider alternate positions
